

ASSIGNMENT - 1

K . seshubabu

A25126552218

1. Single Inheritance

```
package javaproject;

// Create the parent class
class Parent {
    void display() {
        System.out.println("This is the parent class");
    }
}

// Child class inherits Parent using extends keyword
class Child extends Parent {
    void show() {
        System.out.println("This is the child class");
    }
}

// Main class
public class Inheritance1 {
    public static void main(String[] args) {

        // Create an object of the child class
        Child obj = new Child();

        // Calling inherited method
        obj.display();

        // Calling child class method
        obj.show();
    }
}
```

2. Multilevel Inheritance

```
package javaproject;

// Create the parent class
class Animal {
    void eat() {
        System.out.println("Animal is eating");
    }
}

// Dog inherits Animal
class Dog extends Animal {
    void bark() {
        System.out.println("Dog is barking");
    }
}

// Puppy inherits Dog (multilevel inheritance)
class Puppy extends Dog {
    void play() {
        System.out.println("Puppy is playing");
    }
}

// Main class
public class MultiLevelInheritance {
    public static void main(String[] args) {

        // Create an object of Puppy class
        Puppy p = new Puppy();

        // Calling inherited method from Animal
        p.eat();
    }
}
```

A25126552218

3. Hierarchical Inheritance

```
package javaproject;

// Create the parent class
class Demo {
    void Big() {
        System.out.println("this is the calss Demo");
    }
}

// Goes inherits Demo
class Goes extends Demo {
    void Horse() {
        System.out.println("Horse was running");
    }
}

// Rose also inherits Demo
class Rose extends Demo {
    void Pig() {
        System.out.println("Animal was eating");
    }
}

// Main class
public class HierarchicalInheritance {
    public static void main(String[] args) {

        // Create an object of Goes class
        Goes g = new Goes();
        g.Big();
        g.Horse();
    }
}
```

4. Hybrid Inheritance

```
package javaproject;

// Create the first parent class
class fir {
    int a = 10, b = 90;

    void rif() {
        System.out.println(" addition is " + (a + b));
    }
}

// sec inherits fir
class sec extends fir {
    double c = 2.34f, d = 4.56f;

    void ces() {
        System.out.println(" th eresult is " + (c + d));
    }
}

// thi inherits sec
class thi extends sec {
    String name = "seshu, phk";

    void hit() {
        System.out.println(" name is" + name);
    }
}

// four also inherits sec
class four extends sec {
    int f = 32, g = 34;
```

A25126552218

5. Multiple Inheritance

```
package javaproject;

// Create the Father interface
interface Father {
    void house();
}

// Create the Mother interface
interface Mother {
    void car();
}

// Target implements both interfaces
class Target implements Father, Mother {

    public void house() {
        System.out.println("Father has a house");
    }

    public void car() {
        System.out.println("Mother has a car");
    }
}

// Main class
public class MultipleInheritance {
    public static void main(String[] args) {

        // Create an object of Target class
        Target t = new Target();

        // Calling methods from both interfaces
```
